

## Collections

OnRule's *self-serving* Collections presents *timely, view-only, and secured visibility of the compliance records* to stakeholders, enabling better time-to-market and time-to-revenue, resulting into higher customer satisfaction and productivity gain.

**Background:** Throughout the value chain, sharing the information regarding the status of the product regulatory compliance is important to stakeholders: the legal and marketing groups require these documents before authorizing a product 'go-live'; sales group needs it to present as a proof to the customers; distributors need it before they can formally start selling the product in a market; shipping needs the mandatory compliance documents & labels to be shipped along with the product.

**Problem Statement:** Having an accurate visibility of the status of the product regulatory compliance for a product-market mix is critically important to many stakeholders – from program management, legal, marketing, sales, distributors, shipping & logistics, etc. Additionally, for Global Market Access a visibility and access of the core compliance documents is required as an important collateral.

Today, the compliance teams spend many hours manually fulfilling the requests for information (sometimes repeated) from various constituencies and stakeholders. This administrative task takes important time away from their limited hours.

The owners of the compliance records must ensure that the stakeholders receive only the relevant information, and that they could not alter the documents.

**Our Solution:** *Provide instant, secured & view-only access of the compliance information; create a self-serve model:*

- Automate service requests to provide visibility to stakeholders
- Instant creation of view-only collections
- Compliance status by products & markets
- Secured access to a person or group of people
- An expiration legend gives a bird's-eye-view of expirations
- A bar graph provides a visibility of the upcoming expirations up to 24 months
- A geo graphs shows countries where compliance records are not expired
- As records are updated, the relevant collections automatically get updated
